Velcro brakes to prevent accidental unrolling.

Just as in our OLAES® and BLAST® Bandages, the Control Wrap includes a series of brakes that prevent accidental unrolling during application. The brakes also provide grip surfaces during the wrapping process and assist in maintaining the desired pressure and position of the bandage. This is extremely helpful when changing angles during the wrapping process or if bandaging awkward injuries. By preventing accidental unrolling, you minimize the risks of contaminating a clean bandage, wasting a bandage due to contamination, losing time while managing loose ends, and losing pressure after applying the bandage due to shifting material.

## CONTROL WRAP

By preventing accidental unrolling, you minimize the risks of contaminating a clean bandage.

YOUR EQUIPMENT SHOULD **NEVER** BE A COMPROMISE.
